exe file to your desktop and open it .exe file using Notepad++ or any other text editor and find its code nIf you are able to find it, copy it to notepad nAgain, paste it to the license file nOnce you done it, save the license filenNow run the license file . You can check by clicking on the checkbox nIf you didn't see the message on checkbox, then you need to refresh your browser or restart it once and check again After this, you have successfully installed it so, make sure that you select the option to activate it nOnce you are done with that, follow the steps which are mentioned below nOnce you done it, you are all set and you are ready to play the game nQ: WP7: Inappsettings I want to display a settings screen when the app launches for the first time, but in the tutorial I found on the web, they do something like the code below: private void Application_Launching(object sender, LaunchingEventArgs e) { // Handle the Launching event of the application } I don't want to handle this event, I just want to display a screen with settings. Do you have any ideas how to do that? A: I believe that the best way to do this is to create a small

second app that will be launched automatically (in the system tray for example). The first app will just call the function inside the second. In the second app you'll create the screen with the settings. Now all you need to do is to create a package that will be part of the first app and that will call the second app on the launch. This way you won't even need to do any code in the main app because you'll be calling the launch on the first app. In a digital subscriber line (DSL) communications system, the ability to provide for remote operation or control of DSL equipment is generally necessary to provide services such as intelligent network services and/or provide a customer communication management capability, such as providing a gateway into an Advanced Intelligent Network (AIN). For example, service providers can provide service monitoring and diagnostic capability to DSL customer sites using a service monitoring device (e.g., a remote service monitor) connected by a data path to a communication network that provides a DSL service. As such, the service monitoring device can collect information regarding operation of the DSL equipment 82157476af
